Global Packaging

GALAXY
Stretch Film

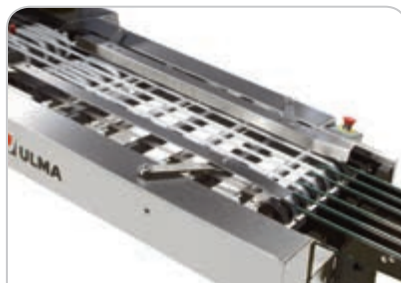

Tray wrapping machine

Galaxy

Easily programmable with diagnostic system

Easy to Sanitize automatic Infeed

Easy Internal Access for Maintenance and Sanitation

The GALAXY has been specially designed to meet the market requirements of high speed tray over wrapping of fresh food products, with stretchable-film. It is a high-performance, easy to operate and easy to clean packaging machine. This makes it the perfect machine for central packaging facilities.

It has mechanical strength and advanced electronics, which allow for its high reliability, and flexibility. The GALAXY can economically wrap a wider range of trayed products, with enhanced appearance.

TECHNICAL FEATURES

- ▶ Completely automatic or manually programmable operation.
- ▶ Double motor-driven film unwind system with automatic change over.
- ▶ Variable pre-stretching and folding according to tray dimensions.
- ▶ Programmable film length to minimize film consumption.
- ▶ Automatic infeed conveyor.
- ▶ Programmable speed according to tray/product.
- ▶ End of film detection for each film roll.
- ▶ Self-diagnostics in control panel.
- ▶ Centralized lubrication.
- ▶ PVC, polyethylene, SSD and polyolefin films.
- ▶ Anticorrosive and easy-to-clean assembly.
- ▶ According to EC standards.

OPTIONS

- ▶ Gravity and motor-driven output belts: Inline, 90° and 180°.
- ▶ Connection to machine control for device or band synchronism.
- ▶ Packaging system with printed film (GALAXY P).
- ▶ Pressure sealer cooler tunnel. A sealing and shrinking system for packing with stretch shrink films.
